Registered Nurse

Dallas/Fort Worth Area

Summary

My passion for teaching my patients and their families has inspired me to obtain my Master's in Nursing Education. I enjoy learning about the art of teaching, specifically in healthcare.

What drives me is being able to provide my best nursing care to my patients and seeing how resilient they are. These patients are usually utilizing respiratory assistance such as ventilators, on multiple drips, post-surgical, and are hemodynamically unstable.

I have witnessed life take its first breath and its last. Through my experience working in the hospital, I've learned the importance of paying attention to subtle details that can make a life changing impact. I've learned to be quick on my feet because it is imperative when having to make good decisions under a lot of pressure. I always make sure my patient's needs are heard because it is essential in ensuring optimal health outcomes and a good quality of life. I always stay honest because every small decision can impact the care the patient receives.

I have helped moms and dads cope with their baby being so sick they cannot hold or touch their newborn. Through my experience in the NICU, I have learned the importance of empathy and seeing things through the family's perspective. Being able to communicate with the healthcare team and the family in a way everyone understands is also a skill I have developed.

Working in the critical care setting has impacted the level of importance of how I view details. I have become strong at making good decisions under a lot of pressure with a limited timeframe. My communication skills have expanded where I can adapt to different situations to ensure everyone is on the same page. I am also a

very strong patient advocate. I am always pushing to make sure my patient receives the best care possible.

Experience

Baylor Scott & White Health

Registered Nurse

March 2019 - Present (1 year 3 months)

Provides critical care monitoring to level III patients. Collaborates with the healthcare team to promote holistic healthcare. Allscripts charting system
